Where each piece goes

Knobs: in the strip of panel under the 8 knobs (above the pads), one cell under each knob.

Pads: *presets* above the top row, *performance* under the bottom row, one cell per column.

Faders: the short strip above the 9 faders; the buttons strip under the 9 fader buttons.

Tags: next to their button (the name printed on the Launchkey is in small type on each tag).

The spacing is an estimate: lay a strip in place before gluing. If the cells drift off their controls, cut along the dashed lines and place each cell, or measure knob 1 → knob 8, pad column 1 → 8 and fader 1 → 9 (centre to centre) and set `\kp`, `\pp`, `\fp` in `docs/overlays.tex` to a seventh (an eighth for the faders) of them.

Removable tape or repositionable glue keeps the panel clean, and the overlays swap with the card.
